1ST SEMESTER

24 OCTOBER 2021

CSE-401

18161009
18101009

1

My id 18161009 // Here, id = odd ?

So, M/D/1 model

Here, $\lambda = 9 \text{ customers} / 5 \text{ min}$

Here, $\lambda = 9 \text{ customers} / 5 \text{ min} = \frac{9}{5} = 0.56 \text{ min}$

$\mu = 10 \text{ customers} / 5 \text{ min} = \frac{10}{5} = 0.5 \text{ min}$

$$\rho = \frac{\lambda}{\mu} = \frac{0.56}{0.5} = 1.12$$

w_s = expected waiting time per customer in system

w_q = expected waiting time per customer in queue

l_s = expected number of customers in system

" " " " queue

l_q = "

For M/D/1 model

18101009

9/

$$\begin{aligned}
 w_q &= \frac{\lambda}{2\mu(1 - \lambda/\mu)} \\
 &= \frac{0.56}{2 \times 0.5(1 - 0.5/0.56)} \\
 &= \frac{0.56}{2 \times 0.5 \times 0.06} = 9.333 \\
 &= 9.33 \text{ min.} \\
 &\quad \text{(Ans)}
 \end{aligned}$$

$$\begin{aligned}
 w_s &= w_q + \frac{1}{\mu} \\
 &= 9.33 + \frac{1}{0.5} \\
 &= 11.33 \text{ min (Ans)}
 \end{aligned}$$

$$\begin{aligned}
 L_q &= \frac{\lambda^2}{2\mu(1 - \lambda/\mu)} \\
 &= \frac{(0.56)^2}{2 \times 0.5(1 - 0.5/0.56)}
 \end{aligned}$$

$$\begin{aligned}
 &= \frac{0.3136}{0.06} = 5.22666 \dots \\
 &= 5.2267 \text{ (Ans)}
 \end{aligned}$$

$$\begin{aligned}
 L_s &= L_q + \frac{\lambda}{\mu} = 5.2267 + \frac{0.56}{0.5} \\
 &= 6.3467 \text{ (Ans)}
 \end{aligned}$$
